[Home](#)

The LV/119 SYSTEM is a family of products that work together to give end-users the ability to scale their equipment to their current needs. The fact that this is a cohesive system means that end-users are able to mix and match accessories in most cases. For example: One could take a COVERT Front or Rear Plate bag and use it with an OVERT Front and Rear Plate Bag. Users may cross pollinate cummerbunds, shoulder covers, and other parts that will be available. The SYSTEM encompasses many parts, some of which are currently available and some that are in development. These include Back Panels of various types, MOLLE cummerbunds, First Spear Tubes™ integrations, and different placards. The LV/119 OVERT Rear Plate bag was built for those who need a scalable vest to wear in a multitude of environments ranging from Low Visibility to Direct Action. The OVERT shares the same profile as the COVERT plate bags, while possessing additional features that make it more suitable for high profile operations. The rear plate bag features full integration of our Recovery Handle™. The rear bag also features minimal MOLLE webbing and Zippers for future integrations with our Zip-on panels that will be available later this year. Recovery Handle Integration. Full integration of our Recovery Handle. NOTE: the Recovery Handle is NOT included with this product. NOTE: The LV/119 OVERT Rear Plate Bag requires a Front Bag and Cummerbund for proper operation. Back Panel Support. The rear bag also features minimal MOLLE webbing and Zippers for integrations with our Zip-on panels. Note: The back panel integration is proprietary and will not support other brands of back panels. Communications Cable Routing. The Modern Warfighter and Law Enforcement Officer has a radio. To date, the majority of manufacturers have not taken end-user communications needs into their design considerations - we endeavor to break that paradigm. The OVERT offers open shoulders to facilitate commo cable routing inside the plate bags and over the shoulders. Cables may also be routed through the cummerbund access. Cummerbund Attachment. The cummerbund attachment is a proprietary system that allows for the use of all of our cummerbunds as well as allowing for a wide range of adjustment. The cummerbund attaches inside the plate bag, which is advantageous for a few reasons. There is no external mounting that can get snagged or rip off when exiting vehicles in haste. The design creates a smooth profile when worn underneath clothing. Velcro is not utilized as an attachment to the rear plate bag. Velcro wears out over time and is a generally less-than-optimal attachment method when not supported in other ways. Velcro doesn't handle weight well and it sticks to everything, especially cloth seats. Every front plate bag comes standard with sewn loops on the sides for attaching First Spear TUBES for use with Spiritus Systems tubes cummerbund. Plate Fitment. The carrier was designed to fit United States Standard Issue SAPI cut plates, but it will fit other cuts as well as long as they fit within the specifications listed below. The bags were built to accommodate thicker plates, but they will not fit plates do not fall within the measurements listed. Medium -10 x 12.5 Large - 10.25 x 13.25 Extra Large- 11 x 14.00 Thickness - MAXIMUM of 1.20 NOTE: The LV119 Rear Plate Bag is part of the LV119 Plate Carrier System. This item does not include a Front Plate Bag, Cummerbund, Shoulder Covers, Placards, or any other accessories. Additional components are required for proper use. Some images shown with optional accessories, sold separately.

- **Weight Limitations:** Adhere to the maximum thickness of plates (1.20 inches) to avoid compromising the bag's integrity.
- **Avoid Snagging:** When wearing the plate bag, be cautious of external mounting that may snag or rip off during movement, especially when exiting vehicles.
- **Cable Management:** Use the designated cable routing features to prevent tangling or damage to communication cables.
- **Avoid Velcro Attachment:** Do not use Velcro to attach the rear plate bag as it may wear out and fail under stress.
- **Regular Inspections:** Frequently inspect the plate bag for signs of wear and tear. Replace any damaged components immediately.

## Instructions for Installation and Usage

### 1. Preparation:

- Ensure you have the necessary components: a Front Plate Bag and a Cummerbund for proper operation.
- Gather all required accessories and verify their compatibility.

### 2. Fitting the Plate:

- Insert the plate into the designated compartment of the LV119 Rear Plate Bag.
- Ensure the plate fits securely and does not exceed the specified dimensions.

### 3. Attaching the Cummerbund:

- Use the proprietary cummerbund attachment system to connect your chosen cummerbund inside the plate bag.
- Adjust the cummerbund for a snug fit, ensuring it does not interfere with movement.

#### **4. Adjusting for Comfort:**

- Adjust shoulder straps and back panel integration as needed for comfort and stability.
- Ensure that the bag sits securely on your body without excessive movement.

#### **5. Cable Routing:**

- Route communication cables through the designated openings and over the shoulders.
- Ensure cables are secured and do not pose a hazard during use.

#### **6. Wearing the Plate Bag:**

- When wearing the plate bag, ensure that it is properly aligned and secured to your body.
- Avoid overloading the bag with unnecessary items that could affect mobility.

## **Disposal Instructions**

- **Environmental Considerations:** Dispose of the LV119 Rear Overt Plate Bag in accordance with local regulations. Do not dispose of it in regular household waste.
- **Recycling:** If possible, recycle components as per local recycling guidelines.
- **Hazardous Materials:** If the bag contains any hazardous materials or components, ensure they are disposed of safely and in accordance with applicable laws.
